SUPRIYA SINGH
Delhi, India
singh1811supriya@gmail.com +91 9974762926 LinkedIn: www.linkedin.com/in/supriyasingh11

OBJECTIVE

Aspiring technology professional with experience in developing software and AI-driven applications across healthcare, safety, and e-commerce domains. Skilled in problem solving, system design, and building scalable digital solutions. Eager to contribute to impactful projects while continuously learning and applying technical expertise to real-world challenges.

EDUCATION

- **Panipat Institute of Engineering & Technology** **Present (August 2023- June 2026)**
  Bachelor of Information Technology
- **Gujrat Technological University** **(August 2020-Sep 2023)**
  Diploma in Information Technology

SKILLS

- **Programming Languages:** Java, Python, C, C++
- **Web Development:** HTML, CSS
- **Database Management:** MySQL
- **Software Engineering Concepts:** Agile Development, SDLC
- **Problem-Solving & Debugging**
- **Team Collaboration & Leadership**

PROJECT

Women Safety Application (Wsafe)
- Designed and developed a mobile safety application focused on improving emergency response and personal security.
- Implemented key features including panic button alerts, evidence collection, fake call functionality, and smartwatch voice-triggered SOS activation.
- Enabled real-time location sharing and emergency notifications to trusted contacts to enhance user safety.
- Focused on building a practical solution addressing real-world safety concerns.

ONCOMIND – Brain Cancer Prediction System
- Developed an AI-based system to assist in the early detection and classification of brain tumors using MRI datasets.
- Applied machine learning techniques such as Random Forest, Support Vector Machines, and CNN models for tumor detection.
- Improved prediction performance through effective data preprocessing and model training.

Hospital Management System
- Developed a comprehensive system for managing patient records, appointments, and hospital inventory.
- Implemented using Java, MySQL, and Spring Boot for backend functionalities.
- Enhanced system security with role-based authentication.

Cattle Management System
- Designed and developed a digital system to manage and monitor cattle-related information efficiently.
- Implemented features for tracking cattle records, health details, and inventory management to improve farm operations.
- Developed backend functionality using Java and MySQL for storing and managing livestock data.
- Focused on simplifying record management and improving productivity for livestock management.

Kids Space - Interactive Learning Platform
- Created an engaging platform for kids to learn and play in a safe environment.
- Developed using JavaScript, React.js, and Firebase for real-time data handling.
- Implemented parental control features for secure browsing.

INTERNSHIP EXPERIENCE

AI Python Developer Intern
Infoxoras | Jul 2025 – Aug 2025
- Developed AI and machine learning models using Python, NumPy, Pandas, and Scikit-learn.
- Worked on data analysis, model training, and testing for real-world projects.
- Gained exposure to deep learning concepts using TensorFlow/Keras and PyTorch basics.

Java Development Intern
Xipra Technology| July 2024 – Aug 2024
- Developed and optimized Java-based applications.
- Worked with OOP concepts, debugging, and API integration in an Agile environment.
